EDUCATION

LUMS
MS in Computer Science
Aug 2022 – May 2024 | Lahore, Pk
School of Science & Engineering

NUCES (FAST)
BS in Computer Science
Aug 2014 – Jan 2019 | Lahore, Pk
School of Computing

SKILLS

BACKEND & SYSTEMS
Node.js • Go (Golang) • Python
TypeScript • GraphQL • REST APIs
Prisma • PostgreSQL • MySQL
Neo4j • Redis • C++

AI & LLM STACK
Claude API • LangGraph • LangChain
RedisVL • Semantic Caching
Multi-Agent Systems • Guardrails

DEVOPS & INFRASTRUCTURE
AWS (EC2, S3, Lambda, SQS)
GitHub Actions • Vercel • Docker
Linux • CI/CD • Sentry

COURSEWORK

Design & Analysis of Algorithms
Reinforcement Learning
Intelligent Computing
Information Retrieval

AWARDS

Merit Scholarship (LUMS)
60% fee waiver (2023–2024) awarded for academic excellence.

LEADERSHIP

President, SOFTEC 2018
Led 200+ team members to organize Pakistan's largest IT event.

EXPERIENCE

PACKAGEX | Forward Deployed Engineer (Backend & AI)
Jan 2024 – Present | Islamabad, Pk

- Architected custom AI solutions using Claude and an internal Workflows engine, mapping client operational processes into modular building blocks shipped in hours for $250K+ ARR accounts.
- Integrated Claude agents into daily workflows to automate routine programming, code generation, and complex task routing across backend services.
- Developed core SaaS backend APIs with Node.js and Prisma, and engineered a Memcache-style Redis coordination layer to ensure safe idempotent writes in high-concurrency MySQL workloads.
- Connected NetSuite and legacy client systems while managing CI/CD pipelines via GitHub Actions and hosting across AWS and Vercel infrastructure.

BRIDGELINX | Lead Backend Engineer
Feb 2022 – Jan 2024 | Lahore, Pk

- Led a team of two engineers to build backend infrastructure for 9 web and mobile apps using Node.js, GraphQL, and Neo4j.
- Migrated >95% of legacy unstructured Firebase data to a unified Neo4j/GraphQL schema with minimal data loss.
- Managed CI/CD pipelines to automate build, test, and cloud deployment workflows, cutting deployment overhead by 50%.

PROJECTS & RESEARCH

COST-EFFECTIVE CONTENT MODERATION USING LLMS | MS Thesis
Aug 2023 – May 2024 | LUMS

- Evaluated LLM efficiency and accuracy across diverse Reddit datasets to measure performance in reproducing human-like community rule enforcement.
- Engineered a multi-agent AI pipeline using LangGraph to automate policy classification and rule enforcement, implementing guardrails to prevent rogue behavior.
- Built agent- and community-specific semantic caching using RedisVL, LangCache, and `all-mpnet-base-v2` embeddings to significantly decrease inference latency and API cost.

RAFT CONSENSUS ALGORITHM | Distributed Systems Project
Aug 2024 – Dec 2024 | Golang

- Implemented the Raft consensus protocol in Go, including leader election, log replication, commit indexing, and persistent state mechanisms for crash safety.
- Handled failure recovery, split-brain scenarios, and network partitions to guarantee fault tolerance and strict cluster-wide consistency.

TOPICS IN INTERNET RESEARCH | Course Project
Jan 2024 – Jun 2024 | LUMS

Evaluated YouTube Shorts web affordability on rooted Android devices, proving replayed shorts re-fetch entire video assets and ad sequences impose heavy data overhead **[git]**.
